2320030324-Shivaram

Problem Statement: Create a chatbot that can understand and describe images from a conversation.

Algorithm:

Receive Image: Get an image from the user in the chat.

Process Image: Use a pre-trained image recognition model to analyze the image.

Generate Description: Convert the analysis into a simple, understandable description.

Respond to User: Send the description back to the user in the chat.

Dataset: We will use a collection of images with labels that describe what is in each image, such as objects, people, or scenes.
